With Keynesis Lockngo Professional you can easily protect your storage media, especially your portable drives. Having a CD-/DVD-ROM drive in the car or office, for example, can be very helpful in case of theft, since your documents are always close to hand, but at the same time, the data can be extracted from the device, if you don't encrypt it with Keynesis. Keynesis Lockngo Professional can be installed directly onto portable devices without requiring installation on your PC. The software is designed to automatically lock the removable device, which means that only the data on it can be retrieved. Keynesis Lockngo Professional has many other useful features. By encrypting the disk file system structure, Keynesis Lockngo Professional is able to conceal sensitive data, which makes it even harder to extract from the disk. You can configure the application to ensure that files are automatically locked. The password that is used can also be remembered, which makes it possible to unlock the drive, even when the device is in sleep mode. The same password can be used to decrypt the data when it is being used, if required. Keynesis Lockngo Professional is compatible with CD-/DVD-ROM drives, flash drives, USB keys, pen drives, dongles and other devices with a FAT file system. Keynesis Lockngo Professional Review: The program is fairly easy to use and could prove to be a very useful application for protecting your data. It's not only about data theft, but also the risk of careless mistakes that may occur on removable USB drives. Keynesis Lockngo Professional User Rating: 4/5 I like this product and I think it will work fine. I have tried other products that have seemed a little flaky, but I think that is just because the installer probably doesn't like the drive that it is on. But Keynesis Lockngo pro seems stable. The license key cost seems a bit steep, but that is the only complaint I have. I like this product and I think it will work fine. The license key cost seems a bit steep, but that is the only complaint I have. This is probably the best software to protect data on external hard drives. It is easy to use and the information is displayed in an intelligible format. I only wish that the program had a way to automatically open when the device is plugged in.
